

# CPM-200

## Consumables & Accessories Price List

# Premium Grade Vinyl Rolls

For use with our standard resin ribbon range. Length: 15 metres.

This is our most popular material, as it covers the majority of day-to-day requirements for signs and labels.

Lighthouse vinyl is suitable for indoor and outdoor use. Externally, it is not affected by wind, rain, snow etc. Over time, exposure to the sun's UV light (ultraviolet) can affect the pigment in the material. So if you place a sign in a position where it is exposed to direct sunlight, after a period of 4-5 years, there may be a level of 'fading'. By this, we do not mean that the colour in the vinyl will have disappeared, but it will not be exactly the same shade as it was originally.

Once applied, our vinyl can operate in temperatures between -40°C to +70°C.

It is available in a vast array of vibrant colours, hence we are able to produce a comprehensive range of options to cover legislative requirements for Health and Safety, Pipe Marking, COSHH, WRAP etc, for any market in the world. It is also usually possible for us to match corporate colours without the expense of large minimum order quantities.

**CPM208**  
Silver / Grey

**CPM212**  
Clear

To recap some of the benefits of Lighthouse vinyl:

- Highly durable, suitable for indoor and outdoor use
- Excellent temperature tolerance
- Perfect for general signage and labelling requirements
- High quality adhesive

**100.00 €**

# Ultrabond

For use with our standard resin ribbon range. Length: 15 metres.

If you need the ultimate combination of adhesive strength and longevity, Lighthouse Ultrabond® is the material for you.

This material has a 7 year minimum outdoor durability, coupled with a great temperature tolerance range of -30°C to +80°C. Capable of adhering to even the most difficult surfaces, the high grab adhesive gives a fantastic initial tack and a strong ultimate bond; all in all making it perfect for product marking and industrial applications.

# Process Colour Resin Ribbons

For use with our premium grade vinyl and ultrabond ranges. Length: 50 metres.

## Process Colour (CMYK) Ribbons

Our process colour ribbons are able to create hundreds of thousands of colours by simply mixing cyan, magenta, yellow and black in different percentages of dots (known as halftones). This allows for realistic reproductions of photos, or matching of colours that might not be achievable using our standard spot colour ribbons. These ribbons are designed for use with white vinyl.

The ribbons are available to order individually, or as a set. However, in order to print using process colours on the CPM-200 you will require a complete set of process ribbons: process cyan, process magenta, process yellow & process black.

**CPMR253**  
Process Cyan

**CPMR254**

# Speciality Materials

For use with our speciality resin ribbon range. Length: 15 metres.

**CPMS215**  
Photoluminescent

This is an indoor material that soaks up light and will then emit a green glow for many hours if there is a lighting failure. It is ideal for producing signs and labels showing emergency call points, safe exit routes and stairways (including the edges of steps).

**390.00 €**

**CPMS248**  
Brushed Silver

This is essentially a 'decorative' material, designed for applications such as corporate door/nameplates, architectural signage, awards, trophy plates, etc. This material is suitable for interior applications only and can be applied to flat, or slightly curved surfaces.

**235.00 €**

**CPMS295**   
Polycarbonate Overlamine

This is an excellent indoor material, designed to give robust, textured overlamine protection to labels. Main applications include control panel overlays, aircraft cabin decals, product labels, etc.

**235.00 €**

# Polyesters

For use with our speciality resin ribbon range. Length: 15 metres.

Polyester has specific properties that make it highly durable and extremely 'dimensionally stable', which means that it doesn't tend to shrink or expand. Therefore it is ideal for manufacturers' product labels, because it will not shrink or expose adhesive edges that can attract dust/dirt and become unsightly, or unhygienic.

These materials have a temperature resistance of between -40°C to +149°C. As a result, polyesters can be used for labelling equipment, or components that operate at higher temperatures, such as light fittings, motors, valves, batteries etc.
