Safety tips
for driving
in the rain

Use dipped headlights
Dipped headlights mean other
drivers can see you more easily

#1

Watch out for pedestrians
Heavy rain can reduce your visibility,
so take care when travelling in busy
areas with pedestrians and cyclists

#2

Avoid sudden actions
Your vehicle won't react as fast
as it normally would when it's wet,
so try to avoid harsh braking or
rapid acceleration

#3

Use the 5-6 second rule
Increase your following distance to
5-6 seconds to create a safe gap
between you and the vehicle in front

#4

Turn on air-con
Quickly demist your windows
by turning on your air-con

#5

Don't use rear fog lights
Rear fog lights can dazzle drivers
behind you and mask your
brake lights

#6

Avoid travel
Check the weather before you
leave and assess whether your
journey is really necessary

#7
