STF2101

Safety tips for driving in the rain

Use dipped headlights
Dipped headlights mean other drivers can see you more easily

#1

Watch out for pedestrians
Heavy rain can reduce your visibility, so take care when travelling in busy areas with pedestrians and cyclists

#2

Avoid sudden actions
Your vehicle won't react as fast as it normally would when it's wet, so try to avoid harsh braking or rapid acceleration

#3

Use the 5-6 second rule
Increase your following distance to 5-6 seconds to create a safe gap between you and the vehicle in front

#4

Turn on air-con
Quickly demist your windows by turning on your air-con

#5

Don't use rear fog lights
Rear fog lights can dazzle drivers behind you and mask your brake lights

#6

Avoid travel
Check the weather before you leave and assess whether your journey is really necessary

#7
